

14 December 2020

By Goh Yin Foo, CFA, CMT / gohyf@kenanga.com.my

Will the music running up to the year-end party stop anytime soon? Last week, the bulls continued to charge ahead, pushing the key FBMKLCI to hit a high of 1,690 before paring down some gains to finish at 1,685 on Friday. This represents a weekly jump of 62.7 points or 3.9%. In the US, Wall Street was in a consolidation phase as the DJIA settled at 30,046 for a weekly decline of 171.9 points or 0.6%.

During the week, the mid and big caps on the Malaysian stock exchange remained in the limelight, which lifted daily average trading volume to 11.6b shares (from 10.8b shares the week before) valued at RM6.3b (similar with the previous week). The week saw net buying flows from domestic retail investors (of RM717m) while foreigners and local institutions were net sellers (amounting to RM574m and RM143m, respectively).

As the end of the year nears, the ground may turn quieter on the news front. In the coming week, of probable interest is only the last US Federal Open Market Committee (FOMC) meeting for the year scheduled on Tuesday and Wednesday.

And less news may be good news for the local bourse, which has thus far lived up to expectation of delivering positive returns in December with month-to-date gains of 121.9 points or 7.8%. This is consistent with its historical trend as the final month of the year has typically been a profitable period presumably due to window dressing activities. With that, the FBMKLCI has now added 223.1 points or 15.3% from its recent trough of 1,461 on 3 November to hover at its highest level since early July last year.

Yet, while the benchmark index has cancelled out a possible double-top formation following its recent surge, a market correction from an overbought territory could be on the horizon. This may be the case as suggested by its stochastic indicator, with the %K line crossing below the %D line when both values are above the overbought line. In addition, the appearance of a divergence pattern between the RSI and the FBMKLCI (whereby the RSI is plotting lower highs while the index has continued to chart new highs) also signals downside risks ahead.

Technically speaking, we have revised our resistance thresholds to 1,720 (R1) and 1,755 (R2) to cap the FBMKLCI's further progress. On the downside, a likely pullback could then press the key market barometer towards our resistance-turned-support levels of 1,675 (S1) and 1,645 (S2), respectively.

Over on Wall Street, after taking a pause, the DJIA may resume its upward trajectory. Our key support and resistance levels for the DJIA are maintained at 29,100 (S1) / 28,000 (S2) and 30,600 (R1) / 31,300 (R2), respectively.

Chart 1 – FBMKLCI Index

S2	S1	Current Level	R1	R2

Basic Technical Terms:

Reversal Candlesticks	Patterns	Description
Doji Dragonfly Doji(Bullish) Gravestone Doji(Bearish)		Dojis form when a security's open and close are virtually equal. The length of the upper and lower shadows can vary, and the resulting candlestick looks like, either, a cross, inverted cross, or plus sign. Doji convey a sense of indecision or tug-of-war between buyers and sellers.
Engulfing Pattern		A reversal pattern that can be bearish or bullish, depending upon whether it appears at the end of an uptrend (bearish engulfing pattern) or a downtrend (bullish engulfing pattern). The first day is characterized by a small body, followed by a day whose body completely engulfs the previous day's price action.
Hammer (Bullish) Shooting Star (Bearish)		Hammer candlesticks form when a security moves significantly lower after the open, but rallies to close well above the intraday low. This appears in a downtrend. In contrast, the Shooting Star pattern appears in an uptrend. It opens higher, trades much higher, then closes near its open. It looks just like the Inverted Hammer except that it is bearish.
Inverted Hammer (Bullish) Hanging Man (Bearish)		The Inverted Hammer is a single-day bullish reversal pattern. In a downtrend, the open is lower, then it trades higher, but closes near its open price, therefore looking like an inverted lollipop. Hanging Man candlesticks form when a security moves significantly lower after the open, but rallies to close well above the intraday low.
Harami Harami Cross		The Harami is a two-day pattern that can be bullish or bearish. It has a small body day completely contained within the range of the previous body, and is the opposite colour. The Harami Cross is similar to the Harami. The difference is that the last day is a Doji.
Marubozu		A Marubozu candlestick has no shadow extending from the body at either the open, the close or at both.
Morning Doji Star (Bullish) Evening Doji Star (Bearish)		A Morning Doji Star (Evening Doji Star) is a three-day candlestick bullish (bearish) reversal pattern - a long-bodied black (white) candle extending the current downtrend, a short middle candle that gapped down (up) on the open, and a long-bodied white candle that gapped up (down) on the open and closed above (below) the midpoint of the body of the first day.
Spinning Top		Spinning Tops are candlestick lines that have small bodies with upper and lower shadows that exceed the length of the body. They are similar to the Doji candlesticks, and signal indecision.
