		<b>Take Profit</b>	: RM2.10
		<b>Stop Loss</b>	: RM1.78

**INARI AMERTON BERHAD (Technical Buy)**

- Inari closed at RM1.88 (-2.6%), extending the pullback to a key RM1.84 - RM1.90 immediate support base. Price is below all key SMAs (5-day/13-day/50-day/100-day/200-day), suggesting near-term trend is down. However, the arrival at this support band tilts for a tactical rebound if demand re-emerges.
- Stochastic indicator is now sliding toward oversold with TDPR is in the lower zone (elevated selling pressure but flattening), and RSI of 19 is deeply oversold, a typical pre-bounce setup. After two wide-range bearish bars, today printed a small-bodied indecision/spinning-top right on RM1.84, hinting at seller fatigue; a bullish follow-through close of above RM1.90–RM1.92 would add conviction.
- Immediate resistance lies at RM1.92, then RM2.00; if reclaimed, the next upside reference is RM2.05 near the 50% Fibonacci, followed by RM2.10 at the 200-day SMA and RM2.19 around the 38.2% Fibonacci. On the downside, the RM1.84–RM1.90 shelf remains the first line of defence; a decisive break would expose RM1.69 (78.6% Fibonacci) and, in a weaker scenario, RM1.42.
- Strategy-wise, traders should monitor and accumulate only after a confirming daily close above RM1.90–RM1.92. Set TP1 at RM2.00 and TP2 at RM2.10–RM2.19 if momentum extends. Cut loss below RM1.78. This implies roughly 6%–15% upside versus ~6% downside, with risk-reward improving if a clear reversal candle forms at the support band.
